Since opening in 1974, West Central Georgia Regional Hospital (WCGRH) has stood as a beacon of hope for consumers in need of behavioral healthcare services in the west central region of the State of Georgia.

**Quality Management**

**The Joint Commission Corner**

**PERFORMANCE IMPROVEMENT**

We use the FOCUS-PDCA method for performance improvement activities.

Find a process/outcome to improve.
Organize a team that knows the process/outcome.
Clarify current knowledge of the process/outcome.
Understand causes of process/outcome variation.
Select the strategy for process/outcome improvement.

Plan the improvement and continued data collection.
Do the improvement, data collection and analysis.
Check and study the results.
Act to hold the gain and to continue to improve the process/outcome.

The current PI Project is focused on reducing aggression.

Be prepared to talk with The Joint Commission surveyors about how your team, unit, or area has improved services, quality of care, reduced costs, or improved communication, etc.

Also be able to talk about the Improvements in Efficiency, Safety or Quality of Care issues specific to your area or to the client population you serve...
QUESTIONS SURVEYORS MAY ASK YOU ABOUT PERFORMANCE IMPROVEMENT

Q: How are you involved in Performance Improvement activities?  
A: Your answer should be individualized to your area. Possible examples may include:  
   I participated in Safety Care® training and I participate in providing quality care for my clients.  
   I have assisted with collection of data or reporting.  
   I have participated in a FMEA or RCA.

Q: What process (or method) do you use for PI?  
A: FOCUS-PDCA (Find, Organize, Clarify, Understand, Select – Plan, Do, Check, Act)

Q: Whose job is it to improve organizational performance?  
A: It is everyone’s job!

Q: What is a PI project being addressed by the hospital?  
A: Reducing Aggression

What are some examples of aggregate data reported in your area?
Influenza Vaccine

What You Need to Know

1 Why get vaccinated?
Influenza (“flu”) is a contagious disease that spreads around the United States every winter, usually between October and May.
Flu is caused by influenza viruses, and is spread mainly by coughing, sneezing, and close contact.
Anyone can get flu, but the risk of getting flu is highest among children. Symptoms come on suddenly and may last several days. They can include:
- fever/chills
- sore throat
- muscle aches
- fatigue
- cough
- headache
- runny or stuffy nose

Flu can make some people much sicker than others. These people include young children, people 65 and older, pregnant women, and people with certain health conditions — such as heart, lung or kidney disease, nervous system disorders, or a weakened immune system. Flu vaccination is especially important for these people, and anyone in close contact with them.
Flu can also lead to pneumonia, and make existing medical conditions worse. It can cause diarrhea and seizures in children.
Each year thousands of people in the United States die from flu, and many more are hospitalized.

Flu vaccine is the best protection against flu and its complications. Flu vaccine also helps prevent spreading flu from person to person.

2 Inactivated and recombinant flu
You are getting an injectable flu vaccine, which is either an “inactivated” or “recombinant” vaccine. These vaccines do not contain any live influenza virus. They are given by injection with a needle, and often called the “flu shot.”

A different, live, attenuated (weakened) influenza vaccine is sprayed into the nostrils. This vaccine is described in a separate Vaccine Information Statement.

Flu vaccination is recommended every year. Some children 6 months through 8 years of age might need two doses during one year.

Flu viruses are always changing. Each year’s flu vaccine is made to protect against 3 or 4 viruses that are likely to cause disease that year. Flu vaccine cannot prevent all cases of flu, but it is the best defense against the disease.

It takes about 2 weeks for protection to develop after the vaccination, and protection lasts several months to a year.

Some illnesses that are not caused by influenza virus are often mistaken for flu. Flu vaccine will not prevent these illnesses. It can only prevent influenza.

Some inactivated flu vaccine contains a very small amount of a mercury-based preservative called thimerosal. Studies have shown that thimerosal in vaccines is not harmful, but flu vaccines that do not contain a preservative are available.

3 Some people should not get this vaccine
Tell the person who gives you the vaccine:

If you have any severe, life-threatening allergies. If you ever had a life-threatening allergic reaction after a dose of flu vaccine, or have a severe allergy to any part of this vaccine, including (for example) an allergy to gelatin, antibiotics, or eggs, you may be advised not to get vaccinated. Most, but not all, types of flu vaccine contain a small amount of egg protein.

If you ever had Guillain-Barré Syndrome (a severe paralyzing illness, also called GBS). Some people with a history of GBS should not get this vaccine. This should be discussed with your doctor.

If you are not feeling well. It is usually okay to get flu vaccine when you have a mild illness, but you might be advised to wait until you feel better. You should come back when you are better.

Attention All Employees

Reminder!
Annual Tuberculosis Screening

All WCGRH employees must complete the Georgia State Hospital Employee Health Screening Form during the month of their birthday

TB screening is required during each employee’s Birthday month

Tuberculosis screening is conducted in Nursing Services, Building 1, Room 25

Skin Tests are given on Monday, Tuesday and Wednesday

Please follow these guidelines for completing the Annual Employee Health Screening:
- If you have the skin test performed off campus, you still must return the results to Nursing Services and complete the Employee Health Screening Form.
- If you have another job also requiring PPD Testing, we will provide you with a copy of your results.
- If you have had a positive skin test in the past, you are still required to complete the Employee Health Screening Form.

Please Note: If Annual Tuberculosis is not completed within your birth month, Employee cannot work until the screening is completed.

Questions? Please contact Nursing Services at (706) 568-5109

**Did You Know?**

**E-Performance:**

Every employee has access to their e-performance documents thru their self-service which is located at www.team.ga.gov. Your employee I.D. and Social Security or password created will allow you entry. If you have forgotten your password or do not remember your questions—Call 1-888-896-7771. All employees who have an I.D. issued to them when hired have access to all of their personal information and the ability to make any necessary changes without having to come to H.R. However, H.R. is always available if you need assistance or have trouble with the site.

**Orientation is on Oct. 1st. and October 16th. In HR from 1:00-5:00 PM**

**HAVE YOU ACCESSED YOUR SELF-SERVICE INFORMATION LATELY?**

Any Questions please do not hesitate to call Human Resources (706) 568-2260

Staff Development & Training

You asked for training on understanding mental health disorders to include diagnosing, triggers, treatment, and personality disorders.

We listened: Staff Development and Training currently teaches an “Introduction to Behavioral Health” course and a “Principles of Recovery” course. Anytime you need a refresher, please contact us. Additionally, the Office of Learning and Development in Atlanta is currently in the process of revamping our curriculum to better address these topics.
